### DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
No	SOILS	None	Soil Sampling/Laboratory Analytical

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A subsurface assessment will be conducted and soil samples will be collected to determine if hydrocarbon impacts to the subsurface media exist from a former earthen produced water pit.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Five soil borings will be advanced to approximately 10 feet below ground surface at the former pit location. The borings will be continuously field screened using a photoionization detector (PID). A soil sample will be collected from each boring from the interval with the highest PID reading. In the absence of any elevated PID reading, a soil sample will be collected from the total depth of each boring. The soil samples will be submitted for total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and total xylenes (BTEX), pH, and specific conductivity (EC). The analytical results will be compared to Colorado Oil and Gas Conservation Commissions (COGCC) Table 910-1. If EC exceeds the COGCC allowable level, the sample(s) will be further analyzed for sodium absorption ratio. The analytical results will be provided in a supplemental Form 27.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered, a grab sample will be collected from each boring for benzene, toluene, ethylbenzene, and total xylenes (BTEX) analysis.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Soil samples will be collected from the former pit location for laboratory analysis of TPH, BTEX, pH, EC and SAR (if applicable.) If impacted soil with concentrations exceeding COGCC Table 910-1 levels are encountered, the impacted soil will be remediated.

Five (5) soil samples were collected and analyzed. All analytical results came back under Table 910 thresholds.
