1004.d. FINAL VEGETATION TRANSECT

TRANSECT RESULTS OF DISTURBED AREA% 10

TRANSECT RESULTS OF REFERENCE AREA% 59

TOTAL % OF DESIRABLE VEGETATION COVER 17

VEGETATIVE COVER FAIL

Comment:

This location does not meet reclamation regulations; insufficient vegetative cover. Transects were conducted indicating vegetation is not 80% of the surrounding reference area.

Transects over the well location indicates a desirable perennial vegetative cover of 16.9% to that of the reference area.

Location is predominantly bare and exposed soil (52%). The dominant vegetative species observed via transect was Bromus tectorum (30%).

Corrective Action:

Perform reclamation in accordance with COGCC 1000 series rules and establish vegetation with total perennial, non-invasive uniform plant cover of at least eighty (80) percent of predisturbance or reference area levels. Use a seed mixture requested by the surface owner, or a mixture prescribed by the local county NRCS. Ensure erosion controls are implemented to stabilize the seeded soil. Once vegetation meets 1000 series standards, submit a Form 4 Sundry and a follow-up inspection will be scheduled. Continue to monitor and manage this site until Final Reclamation has passed.
