#### COMMENTS:

PDC is requesting the Commissioning of a bradenhead pressure abatement system that combusts bradenhead gas via VRU system with bradenhead gas routed to a working tank to keep pressure below 50 psi threshold. This system will be commissioned within 3 months of sundry approval and in place for 6 months. At which time PDC will complete a revaluation of pressure to determine if further mitigation is required. Buildup and duration of pressure will be monitored via automation system and PDC will contact COGCC engineer if pressure increases at any time

COA Type	Description
	<p>1)Any gas produced from the Bradenhead will be controlled with the best available technology to protect health and safety. Operator will ensure that any emissions do not constitute a nuisance or hazard to public welfare and are subject to CDPHE regulations.</p> <p>2)Immediately upon discovery Operator will implement measures to reduce surface casing pressure to below 50 psi. Operator will further utilize an open flow system to keep back pressure on the bradenhead to below 50 psi. Periodically well will be blown down to 0 psi, shut in and allowed to build to 50 psi or for 48 hrs, prior to returning to open flow into the flowline. Pressure and rate will be recorded in such a way as to characterize the well performance for comparison over time.</p> <p>3)Commencing with the submission of this Sundry, Operator will have 6 months to evaluate the effectiveness of proposed mitigation followed by a summary of well performance submitted via sundry to the COGCC at which time the future course of action will be considered.</p>
