Melissa,

This email is to confirm that I just spoke with our drilling contractor, Drilling Manager and Field Geologist and all three confirmed that we will not be drilling salt sections in the Millican #1-7 well or any other formations that will increase the salinity of our drilling mud, which was proposed as a fresh water drilling mud system.

Therefore, I would like to change the Millican #1-7 drilling permit application to remove the pit liner requirement and to withdraw the Form 15, for it is my understanding that this form is not a requirement for an earthen pit. If I am wrong and it is required, please modify it to no longer include the pit liner.

Thank you,  
Chuck Pollard
