General Comment:

This is an orphaned well inspection. Inspection completed as site visit prior to plug and abandonment task and verify landowner identified possible flowline riser for removal.

Inspection may also identify possible task required for final closure/release of location from the Orphaned Well Program.

See link at end of report for path to downloadable pictures.

The Tudex Plugging and Flow line Abandonment Project is underway. The Croff 12-5 is one of the wells on the project to be plugged and abandoned. This site visit was completed in preparation for moving rig onto the well location for plugging task and to locate flow line riser identified by landowner and requested removal. The flow line riser was located and is across access road from well site. Landowner has placed a black plastic culvert over T-Post marking location. The flow line is 2" line with baylon valve installed but is open ended. No issues were noted at time of inspection that would prevent rig and equipment from staging and performing plugging task.	stjohnw	07/24/2019
