

Development Summary

The RWF 34-12 Pad will be used for produced water storage for the proposed wells planned on the RWF 12-12 Pad and Federal Rulison 8 Pad. The existing tank battery will be upgraded and relocated as shown above. The tank battery will consist of 6-500bbl produced water tanks, 2-500bbl gun barrels, 1-500bbl condensate tank, and 1-200bbl condensate tank. The tanks will be installed within a new steel lined containment structure approximately 88' x 44' to be installed along the north side of the pad. One (1) electric pump will be installed adjacent to the proposed tank battery within an enclosed pump shed. Water will be pumped from the tank battery to the Clough Production Pit (Pit 44-16-694) through 1-6" Flexpipe water pipeline (approx. 22,174'). Three (3) ECD will be installed adjacent to the existing separator.

Legend

- Production Gas Well
- Existing Fence
- Existing Production Equipment
- Proposed Production Equipment
- Proposed Pad
- Proposed Daylight Line
- Proposed Limit of Disturbance
- Proposed TopSoil Stockpile
- Existing Limit of Disturbance
- Proposed Water Pipeline (1-6" FlexPipe)
- Proposed Water Pipeline (1-4" FlexPipe)
- Parcel Ownership
- Existing Gas Pipeline
- Existing Pad
