**Description of Corrosion Protection:**

The pipeline was installed with FBE coating and has an impressed current system for cathodic protection.

**Description of Integrity Management Program:**

The pipeline is piggable and will be maintained in accordance with 49 CFR 195. A post construction hydrostatic test was been performed and is attached. Continous pressure monitoring has been implemented as the integrity method.

Construction method used for all public by-ways, road crossings, sensitive wildlife habitats, sensitive areas and natural and manmade watercourses (i.e., bored and cased or bored only)

All crossings were bored

### **CRUDE OIL TRANSFER LINE REALIGNMENT**

Date: 06/15/2018

#### **Description of Realignment:**

This existing crude oil gathering pipeline, built in 2014 and 2015 in two sections, was acquired by Noble Midstream in 2017 and was out of service until 6/15/2018. Modifications were made in 2018 to connect this line to newly constructed MUO-08-TLN-100 Oil and existing PHMSA regulated Tampa pipeline. The original hydrostatic tests for both sections are included in this submittal. The original submittal (Document 401726174) did not include the second pipeline segment constructed in 2015. Hydrostatic tests of the newly constructed tie-ins are available. The geodatabase and overview map depicted the entire pipeline.

### **OPERATOR COMMENTS AND SUBMITTAL**
