General Comment:Spill Inspection

On 8/24/2019 at ~0930, operator contacted inspector about a flowline spill at the Big Sky 5-11 well of ~10-15 bbls. Free liquids were vacuumed into a truck, the spill was contained and well shut in. Inspector was told that the main office was completing the Form 19I and contracting the appropriate people (Lincoln County LGD and the land owner). It had rained the night before so oil, produced water and rain water were in the spill. A small area of the spill was outside the deadmen and in the adjacent fallow wheat field. An earthen berm was placed around the remaining spill that would be placed in a roll off on Monday or Tuesday and properly disposed of. The flowline would also be excavated and repaired. Gas was still bubbling from the flowline area next to the well but was diminishing. Possible cause of leak is pipe corrosion.
