### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pit was previously backfilled. Historic Google Earth imagery indicates that the pit was closed some time between 2006 and 2011.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Core samples were obtained using a skid steer with auger attachment, in an attempt to obtain proper documentation for pit closure and confirm previous samples. One samples was taken because sensory observations during sampling concluded that an exceedance was probable and soil samples most likely would not meet Table 910-1 requirements. Analysis (attached) shows that the sample did not meet requirements for total TPH. Background (offsite) samples were not collected, as it's been previously established that high levels of arsenic are naturally occurring in the area. See attachments for previously tested arsenic samples in the Powder Wash area. Please see attachments for GPS coordinates of sample and soil observations made during pit sampling.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

A visual inspection was performed looking for signs of stained soil and potential leeching of pit components that may have impacted surface water or groundwater, none were found. No groundwater was encountered during sampling.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

A visual inspection was performed looking for signs of stained soil and potential leeching of pit components that may have impacted surface water or groundwater, none were found.

Remediation Project Number: 9240

**COA Type****Description**

	The sample that is collected from the "interval indicating the highest PID reading" should be analyzed for full COGCC table 910-1.
	It may be necessary to step out from the proposed 4 borehole locations around the pit to determine the lateral extent of contamination.
	COGCC EPS staff should be notified immediately, in the event that groundwater is encountered during investigation.
	This Site Investigation and Remediation Workplan (Form 27) is conditionally approved; however, additional information or activities may be required during the course of remediation.
	From Conversation with Wexpro Staff, April Stegall, the direct push rig will have the ability to drill deeper than 20 feet if necessary to define the vertical extent.. The Operator shall assess the nature and extent of contamination with confirmation soil samples and delineate the horizontal and vertical extent of contamination. If impacts exceed 20 feet in depth then the vertical extent shall be determined.
	Samples shall be analyzed for the complete Table 910-1 constituent list. The Operator may request a revised constituent list if they are able to demonstrate and provide justification for a reduced list.
	The Operator shall providing a minimum of 72 hours notice to Environmental staff Kris Neidel (kris.neidel@state.co.us) or 970-871-1963 prior to conducting field operations.
	The operator shall comply with Rule 910.b.3. The operator shall ensure that analytical laboratories use appropriate methods with detection limits less than or equal to the concentrations in Table 910-1.

**Attachment Check List**

Upon approval, the approved Form 27 and all listed attachments will be indexed to the Remediation Project file. Only the approved Form 27 will also be indexed to the related Facilities.
