**Attachment to Form 4**  
**Comments**

1. The maximum estimated volume of natural gas to be vented is 52 MCF per day.
2. Gas analysis is attached.
3. The request is based on lack of infrastructure and lack of gas market. Prior to June 2019, there was insufficient infrastructure to meet pipeline requirements. The treater on-site has a working pressure rated at 25 psig and we anticipated line pressures of 35 psig to 40 psig. Also, there was no contract in place to transport the gas.
4. The location is not located within 1,320 feet of a Building Unit or a Designated Outside Activity Area.
