COMMENTS:

Bradenhead mitigation. The Bradenhead test performed on 7/9/19 showed a starting surface CP of 126 psi and blew down to zero by the end of the test. Based on sample results, the well can be blown down from this pressure daily without requiring a permit and stay within APEN limits. We're requesting permission to perform 3 – 30 day blowdowns with 1 week build ups in between each 30 day cycle to determine if the pressure can be mitigated in this way before taking add'l steps. A follow up sundry with the results of this blowdown sequence will be submitted. A gas sample was taken and analysis submitted to the COGCC. No liquid was present.
