Subject: 36-1 equipment serial numbers
Date: Thursday, September 19, 2019 12:06:54 PM

Dave,

Good afternoon,

I'm still trying to pin down the equipment serial numbers. Here is the list that I have accumulated so far, but until the final layout is set I don't know the specifics on the tanks.

Existing 500-barrel tanks that will be the new water tanks: 265352, 265353, and no number
New 400-barrel tanks, as they are now temporarily stored on site awaiting final placement:

Row of 3: 12130, 12125, 12124

Row of 5: 12131, 12123, 12121, 12120, 12122

Vertical Knockout: 25032

Heater Treater: BC029-004

Combustor (for vapor recovery from tanks): 34937-4

Gas Meter: 150013675

Enclosed Flare/Combustor: No serial number yet, the unit is sitting in the Baggs storage yard awaiting delivery to the well pad.

Once the facility is in place there will be an as-build plat prepared showing the equipment serial numbers.

Locally the fiber optic cable is out while the carrier is replacing/upgrading the lines, so we have no telephone or computer communication with anyone in the area.

Thanks,

Rick

Dave,

Good afternoon,

Here are all of the serial numbers for the equipment on the WPU-36-1 well pad.

Once all of the equipment is set we'll prepare and submit an as-built facilities plat.

Thanks,

Rick
