## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

There is 1 partially buried produced water vault at the location that will be removed.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

The pit will have grab soil samples collected from the 4 cardinal directions 2.5' below the ground surface on the side walls, as well as from the pit bottom. The sidewall samples will be field screened in a 1-gallon clear plastic ziplock bag with a PID and the highest reading of the 4 will be sent to the lab for analysis, along with the pit bottom grab sample. Soil samples will be sent to Origins Laboratory in Denver for DRO/GRO/BTEX (sidewall and pit bottom) and EC/pH/SAR (sidewall only) analyses.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

It is not anticipated that the bottom of the open pit left behind by the removal of the partially buried produced water vault will interact with groundwater. However, if it is found that is the case, a groundwater grab sample will be collected and submitted to Origins Laboratory for BTEX analysis.

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

# REMEDIAL ACTION PLAN

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Partially buried produced water vault will be removed by Unlimited.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Any remediation action, if any, is dependent on pit soil sample analysis results from the lab. If lab results show no impacts, the pit will be backfilled. If lab results show any impact, it will trigger an assessment of impact extent.
