RE: Flaring Permit for WPU 36-1V-H2 well in Moffat County, Colorado.

Director Robbins,

The Moffat County Commissioners are writing to encourage expedient processing of the WPU-36-1V-H2 flaring permit application from Petroleum Resource Management.

Moffat County's social and economic future has been impacted by recent legislative changes in coal, power generation, and natural gas and oil industries. We are concerned about unnecessary delays further diminishing our economic situation. Petroleum Resource Management (PRM) has responsibly operated in Moffat County for years and has spent tens of millions of dollars in our economy. PRM and their partners have all the permits necessary to responsibly develop this well, except the flaring permit. We request this permit be completed through your department in a responsible and expeditious manner.

If you have questions about Moffat County's support for COGCC issuing this flaring permit, please contact me or our COGCC Local Governmental Designee, Jeff Comstock at the number listed below.

Respectfully,

Don Cook, Chairman
Moffat County Commissioner
