SUNDRY NOTICE

Submit a signed original. This form is to be used for general, technical and environmental sundry information. For proposed or completed operations, describe in full in Comments or provide as an attachment. Identify Well by API Number; identify Oil and Gas Location by Location ID Number; identify other Facility by Facility ID Number.

OGCC Operator Number: 10417 Contact Name Timothy Hart
Name of Operator: INCREMENTAL OIL & GAS (FLORENCE) LLC Phone: (303) 999-5420
Address: 113 N SANTA FE AVE Fax: ()
City: FLORENCE State: CO Zip: 81226 Email: thart@fremontpetroleum.com

To: Name _____ Number _____

☐ **ABANDON PERMIT: Permit can only be abandoned if the permitted operation has NOT been conducted. Field inspection will be conducted to verify site status.**

☐ WELL: Abandon Application for Permit-to-Drill (Form2) – Well API Number _____ has not been drilled.

☐ PIT: Abandon Earthen Pit Permit (Form 15) – COGCC Pit Facility ID Number _____ has not been constructed (Permitted and constructed pit requires closure per Rule 905)

☐ CENTRALIZED E&P WASTE MANAGEMENT FACILITY: Abandon Centralized E&P Waste Management Facility Permit (Form 28) – Facility ID Number _____ has not been constructed (Constructed facility requires closure per Rule 908)

OIL & GAS LOCATION ID Number: _____

☐ Abandon Oil & Gas Location Assessment (Form 2A) – Location has not been constructed and site will not be used in the future.

☐ Keep Oil & Gas Location Assessment (Form 2A) active until expiration date. This site will be used in the future.

Surface disturbance from Oil and Gas Operations must be reclaimed per Rule 1003 and Rule 1004.

☐ **REQUEST FOR CONFIDENTIAL STATUS**

☐ **DIGITAL WELL LOG UPLOAD**

☐ **DOCUMENTS SUBMITTED** Purpose of Submission: _____

RECLAMATION**INTERIM RECLAMATION**

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.

Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

Operator requests continued approval to vent associated/produced gas for this well. The estimated volume of gas to be flared is 1.6 MCFD; gas content is primarily methane and heat content is 1078-1182 BTU/SCF; H2S is less than 1 ppm and is Below Detection Limit (BDL); extended gas analysis is attached.

This request is based lack of available infrastructure due to being in a remote area with no immediate plans to construct infrastructure. The nearest tie-in point is greater than 10 miles from this well and pipeline installation costs alone are estimated at \$400,000/mile for a total in excess of \$4 million.

Based on 1.6 MCFD and current natural gas spot price of \$2.39/MMBtu, gross gas revenue for this well before factoring operating costs would be approximately \$3.82/day, or \$1,396/year. Operator has no additional producing wells within a half-mile radius of the subject well. Therefore, installation of gas infrastructure is viewed as uneconomic at this time. Operator intends to drill up to four wells in the Florence Field per year in the near term. Operator is actively seeking a gas sales contract with a potential buyer; tie-in to the subject well will be reevaluated for economic feasibility when that system is constructed.

In accordance with CDPHE APCD regulations, Operator vents this low volume of gas and has secured site-specific permits as required by CDPHE APCD (see CDPHE permit #12FR2411 for AIRS ID 043/0174/001). The operator has complied with rule 805.b.(1) and CDPHE APCD Regulation numbers 2, 3, and 7, where applicable. In accordance with Rule 912, gas vented or used on this lease is reported on Operator's Monthly Report of Operations, Form 7.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: 0 in ppm (parts per million)

Date of Measurement or Sample Collection 05/07/2019

Description of Sample Point:

Well casing at O&G well wellhead.

Absolute Open Flow Potential 1600 in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Requesting to vent up to 1,600 CFPD (the APFP of the well). The amount of vented gas will be kept to a minimum and will be adjusted downward so it is just enough to ensure oil production in the well. No H2S release potential, H2S is below detection limit.

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: 1398 FEET

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: 1167 FEET

COMMENTS:

Best Management Practices

No BMP/COA Type

Description

Operator Comments:

Operator requests continued approval to vent associated/produced gas for this well. H2S is less than 1 ppm and is Below Detection Limit (BDL). This request is based lack of available infrastructure due to being in a remote area with no immediate plans to construct infrastructure due to uneconomic conditions. Production in the Florence field began in 1876. Very little gas is produced in the field. With an average depth in the field of approximately 3,000 ft., a normal pressure gradient would be 1,200 psig. However, the well currently has <2 psig. Shutting in the annulus results in backpressure which significantly reduces oil production. Due to low per well rates in the field and lack of nearby access to a gas gathering system, installation of a gas gathering system including a system to meet pipeline specifications, is uneconomic. Additional required information is found in the Engineering tab comments.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
