Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	50' x 50' x 20'; 20' x 25' x 15'	Field screening and laboratory analysis

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Impacts were discovered during trenching for a pipeline replacement project. Discolored and odorous soils were encountered in a north/south trench leading from the compressor building and an east/west trench on the west side of the condensate tank secondary containment. Two soil samples were collected from each trench and analyzed for TPH-GRO, DRO, and VOCs. A tracer dye test was performed on the secondary containment to identify the leak locations.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Fourteen boreholes were advanced both inside and outside the facility fence line. Two samples were collected from each borehole, one from the depth with the highest PID reading and one from the bottom of the borehole. All samples were submitted for GRO, DRO, and BTEX analysis. Contamination was identified from 4.5 feet below ground surface (bgs) to just above a clay layer at approximately 30 feet bgs. The soils between ground surface and 30 feet are predominately fill material and sands/sand loams.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

SITE INVESTIGATION REPORT

SAMPLE SUMMARY

Soil

Number of soil samples collected 32

Number of soil samples exceeding 910-1 7

Was the areal and vertical extent of soil contamination delineated? Yes

Approximate areal extent (square feet) 2312

NA / ND

-- Highest concentration of TPH (mg/kg) 7360

NA Highest concentration of SAR

BTEX > 910-1 Yes

Vertical Extent > 910-1 (in feet) 32

Groundwater

Number of groundwater samples collected 0

Was extent of groundwater contaminated delineated? No

Depth to groundwater (below ground surface, in feet) 0'

Number of groundwater monitoring wells installed 0

Number of groundwater samples exceeding 910-1 0

 Highest concentration of Benzene (µg/l)

 Highest concentration of Toluene (µg/l)

 Highest concentration of Ethylbenzene (µg/l)

 Highest concentration of Xylene (µg/l)

 Highest concentration of Methane (mg/l)

Surface Water

0 Number of surface water samples collected

0 Number of surface water samples exceeding 910-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

Is further site investigation required?

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Approximately 210 cubic yards of impacted soil was excavated from the areas surrounding BH-04 and BH-10 to a depth of 14 feet below ground surface (bgs). Samples were collected from the bottom of the excavation and submitted for GRO and DRO analysis. Analytical results from bottom of the excavation confirmed GRO and DRO concentration were below standards. A complete Table 910-1 was requested on the sample. Excavation was completed on the southwest corner of the containment area. EX-15 was a hole dug between the two active pipelines to a depth of 8 feet bgs. A sample was collected and submitted for BTEX, GRO, and DRO analysis. The results exceeded the TPH and Benzene cleanup standard. An additional 6 feet was excavated and another sample was collected at 14 feet bgs and submitted for a full Table 910-1 analysis. The benzene result was 1 mg/kg exceeding the cleanup standard. Further excavation was not possible due to the depth and location near facility infrastructure. Clean fill was used to backfill the excavation. A new secondary containment was constructed around the condensate tanks in January 2013.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Remediation of impacted soil was completed by excavation to a depth of 14 feet bgs. 210 cubic yards of condensate contaminated soil was disposed of at the EDCD landfill in Carbon, UT. Due to the depth of the remaining impacts, in-situ remediation via natural attenuation has been the remedial approach.

As of 11/18/2012, remaining impacts were

- BH-04: 620 mg/kg TPH @ 17.5'-19.5' bgs

- BH-05: 1,600 mg/kg TPH and 0.44 mg/kg Benzene @ 25'-27' and 0.26 mg/kg Benzene @ 30'-32' bgs

- EX-15: 1.0 mg/kg Benzene @ 14' bgs

We will plan on advancing three soil borings near BH-04, BH-05, and EX-15 to evaluate remaining contaminant levels. If BTEX and TPH contamination remains above Table 910-1 values, SVE wells targeting the most impacted zones will be installed.

Soil Remediation Summary

In Situ

_____ Bioremediation (or enhanced bioremediation)

_____ Chemical oxidation

_____ Air sparge / Soil vapor extraction

Yes _____ Natural Attenuation

_____ Other _____

Ex Situ

Yes _____ Excavate and offsite disposal

_____ If Yes: Estimated Volume (Cubic Yards) _____ 210

_____ Name of Licensed Disposal Facility or COGCC Facility ID # _____ 4041

_____ Excavate and onsite remediation

_____ Land Treatment

_____ Bioremediation (or enhanced bioremediation)

_____ Chemical oxidation

_____ Other _____

Groundwater Remediation Summary

Bioremediation (or enhanced bioremediation)

Chemical oxidation

Air sparge / Soil vapor extraction

Natural Attenuation

Other _____

GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

REMEDIATION PROGRESS UPDATE

PERIODIC REPORTING

Frequency: Quarterly Semi-Annually Annually Other _____

Report Type: Groundwater Monitoring Land Treatment Progress Report O&M Report
 Other _____

WASTE DISPOSAL INFORMATION

Was E&P waste generated as part of this remediation? Yes

Describe beneficial use, if any, of E&P Waste derived from this remediation project:

None

Volume of E&P Waste (solid) in cubic yards 210

E&P waste (solid) description condensate impacted soil

COGCC Disposal Facility ID #, if applicable: 4041

Non-COGCC Disposal Facility: _____

Volume of E&P Waste (liquid) in barrels 0

E&P waste (liquid) description _____

COGCC Disposal Facility ID #, if applicable: _____

Non-COGCC Disposal Facility: _____

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Clean fill was imported to backfill the excavations and the site was regraded to the original conditions.

Is the described reclamation complete? Yes

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

Interim? Final?

Did the Surface Owner approve the seed mix? No

If NO, does the seed mix comply with local soil conservation district recommendations? No

IMPLEMENTATION SCHEDULE

PRIOR DATES

Date of Surface Owner notification/consultation, if required. _____

Actual Spill or Release date, if known. _____

SITE INVESTIGATION DATES

Date of Initial Actions described in Site Investigation Plan (start date). 10/22/2012

Date of commencement of Site Investigation. 10/23/2012

Date of completion of Site Investigation. 11/19/2012

REMEDIAL ACTION DATES

Date of commencement of Remediation. 12/17/2012

Date of completion of Remediation. 06/30/2020

SITE RECLAMATION DATES

Date of commencement of Reclamation. 12/21/2012

Date of completion of Reclamation. 01/14/2013
