UNDETERMINED	SOILS	Not yet known.	Soil samples

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Four soil samples will be collected from inside the pit and four soil samples will be collected from the berm around the pit. All samples will be submitted for laboratory analyses to determine the extent of any possible contamination from produced water.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

See above. Pictures of pit are attached. Samples will collected at north, south, east, west locations both inside and outside (berm) of the pit.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Any water in pit currently is rain water.

### Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

If laboratory results indicate soil is contaminated above 910-1 levels, the contaminated soil will be excavated and hauled to a landfill. Manifests will be prepared to document amount of contaminated soil and the location of the landfill.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Soil samples will be collected within 30 days and submitted for analyses. If contaminated soil is present, excavation and removal will begin within 90 days. The original grade of the surface will be restored and the surface will be seeded and strawed with native grass. If necessary, clean soil will be hauled to site to properly restore grade.
