Nick

Thanks for the update.

Eric

Good Morning Eric,

-

A Form 17 test & sample was collected on the Bryant 24-30 on 9/12/2019 based off the COA criteria. We plan on proceeding to plug the well while adhering to the approved Form 6 NOI. Please let me know if you have any questions.

-

Best,

-

Nick

Approved as outlined with the condition of waiting 8 hours after pumping the plug at 1950' to check for pressure/flow. No cement into the surface shoe until pressure/flow is stopped.

Hello Eric,

-

After pumping our shallowest hydrocarbon plug at 4080' we waited and confirmed static conditions and then pumped our Sussex plug at 2500'-2400'. Today we read 2 psi on the surface casing. We will pump our plug from 1950'-1741' over the production casing cut and confirm that there is no pressure/fluid migration before pumping our surface casing shoe plug from 900'-699'. Please let me know if you have any questions or concerns.
