(DETAILS OF WORK)

This well completed as "J" sand producer in July 1954 with initial production of 118 barrels oil and 195 barrels water per day. The steady decline of production and increased water has caused well to reach its economical limit and as there is no other zone to complete and no possibility of stimulating present perforated zone it is proposed to plug and abandon by setting a rock and cement bridge above the perforations, shoot off and pull casing, fill hole with heavy mud with a rock and cement bridge in bottom of surface casing, cement plug in top of surface casing, erect marker, level and abandon location.
