INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A partially buried 100 bbl produced water tank was removed during P&A activities. On October 16, 2019, each side wall of the tank grave was screened for VOC concentration using a PID detector and was observed for potential petroleum hydrocarbon impact such as staining and/or odor.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

One grab soil sample was collected from the sidewall (SS02@4') exhibiting the highest VOC concentration and/or greatest evidence of potential hydrocarbon impact. Additionally, one grab soil sample (SS01@6') was collected from the floor of the tank grave. Samples were collected per USEPA methods and strict chain-of-custody standards were followed. The soil samples were submitted to an accredited lab for analysis of BTEX, and TPH-GRO by USEPA 8260C, TPH-DRO by USPEA Method 8015C. The floor soil sample was also submitted for analysis of pH by USEPA Method 9045D, EC by USEPA Method 9050A, and SAR by USDA Agricultural Handbook 60 method (20B).

All laboratory results were compliant with applicable COGCC Table 910-1 standards.

The laboratory analytical report, sample location figure, and soil analytical results summary table are attached.
