COMMENTS:

Bradenhead pressure mitigation. The BHT performed on 9/20/19 showed a starting surface casing pressure of 145 psi and then blew down to 49 psi by the end of the test. Based on the sample results, this well can be blown down to zero from 145 daily 418 X annually without requiring a permit and stay within APEN limits. We're requesting permission to perform 3 30 day blowdowns with 1 week build ups in between each 30 day cycle to determine if the pressure can be mitigated in this way before taking additional steps. A follow up sundry with the results of this blowdown sequence will be submitted.
