Comment: The area (photo 5) where erosion caused additional disturbance extending into the pasture has been reclaimed and temporarily stabilized with straw blanket. This corrective action from the previous inspection has been completed.
All reclaimed areas that have not met the revegetation requirement must be monitored and reseeded as needed to establish the required vegetation cover. See attached photos.

Comment: Wattles installed at the location have degraded and need to be removed or replaced. This corrective action from the previous inspection has not been completed. Additional rock check dams and a sediment trap were installed near the double gates where erosion occurred out into the pasture. The sediment trap was not installed in accordance to good engineering practice. The 3 sides of the sediment trap are vertical and per good engineering practice, should not be installed steeper than 2:1 slope. Additionally, the depth of the spillway should be 1 ft. below the low point of the embankment. BMP's must be implemented in accordance with good engineering practice and must be maintained until final reclamation is achieved.

Corrective Action: Install or repair required BMPs per Rule 1002.f.(2)C
