CONSERVATION COMMISSION

RECOMPLETION PROGNOSIS
MOUNT HOPE WATER FLOOD
UNIT 28-WI (Formerly Shell-Green A-11)

NWNE 30-9N-53W

Present Status:

DF: 4177

AFE: C-6416

DF_CHF: 11'

Perfs to
be Opened
Muddy

4827-4838

Proposed Work: (All depths refer to open-hole logs and
are contingent on PDC log.)

1. Pull any production equipment in hole. Run sand pump, clean out to PBTD.
2. Run PDC from PBTD to 4700 if PDC log unavailable.
3. Perforate in water Muddy interval 4827-4838 w/4 jets/ft.
4. Install injection equipment and begin injecting down casing. Consult w/Division. (If unable to establish satisfactory rate, consider acidizing or fracture treating.)
