Operator Comment: The equipment at the wellhead is due to the Ruby well being frac protected because of frac operations on Great Western's Rio pad. As we were preparing to return the well to production, we were notified that Great Western would be performing frac operations on an additional well, the Tollway LC24-379HC. If possible, we would like to leave our equipment on site until GW finishes up operations on the Tollway, projected to be early December.

Once GW is finished up we will remove our bridge plug, install needed tubing, re-plumb wellhead and cleanup any excess equipment. Thank you for your consideration.

COGCC Decision: Approved

COGCC Representative: Operator has submitted additional FIRR Doc# 402259730 per photos submitted all corrective actions have been addressed.
