Andy,

I was looking through the DAMORE 5-18HZ PAD Form 2A and I see a few more things I need addressed.

\* This location meets Objective Criteria 5.c. Please provide a BMP that describes how a spill/release of fluids during the well drilling and completion operations will be contained so as to not impact groundwater.

\* The Dust mitigation BMP states: "Water will be placed on dirt access roads to mitigate dust as needed. *If feasible*, magnesium chloride will also be used as needed on access roads to further abate dust." The "*If feasible*" qualifier is a little more open ended than we'd like. Can this be removed?

\* The 803. Lighting mitigation BMP states: "*To the extent practicable*, site lighting shall be shielded and directed downward and inward towards operations to avoid glare on public roads and nearby Building Units." The "*To the extent practicable*" qualifier is a little more open ended than we'd like. Can this be removed?

\* The Odor mitigation BMP states: "KMG will comply with the provisions of 805b *as deemed applicable*. Additional BMPs for the Prowant 4-18HZ location ...". The "*as deemed applicable*" qualifier is a little more open ended than we'd like. Can this be removed?

\* There appear to be Building Units within 1,500 feet in all four cardinal directions of this location. Will KMG revise the 604.c.(2)A - Noise mitigation BMP to address the placement of sound mitigation barriers (e.g. straw bales, sound walls) on all four sides of the pad?

\* I see that the nearest Building Unit is owned by Anadarko. Please confirm if the nearest Building Unit is currently unoccupied and if it will remain so during well drilling and completion operations.

\* This location is within 1,500 feet of Windsor, Johnstown, and Larimer County. I have an earlier correspondence with KMG that indicates Larimer County was notified during the WOGLA process and had no comments. Has KMG been in contact with Johnstown and Windsor to see if they had any concerns with this oil and gas location in proximity to them?

**Doug,**

**Please see below and let me know if you have any questions.**

**Please enter these dates on the Form 2A - Construction start approximately 1/15/2020 and Interim Reclamation start approximately 2/1/2021**

**Operator Comment:**

**As of the current date and corresponding schedules, pad construction to commence following the approval of the Form 2A but no later than 1/15/2020. This will be followed by Production Drilling to commence approximately mid - March 2020. The approximate completions start date is mid November 2020 followed by a mid-December 2020 completions finished date. Interim reclamation to commence within three months post-completion operations due to this location being sited on irrigated crop land.**

**Subject:** [EXTERNAL] Kerr-Mcgee's DAMORE 5-18HZ PAD Form 2A questions

Andy,

I was looking through the DAMORE 5-18HZ PAD Form 2A and I see a few more things I need addressed.

\* This location meets Objective Criteria 5.c. Please provide a BMP that describes how a spill/release of fluids during the well drilling and completion operations will be contained so as to not impact groundwater.

**Material Handling and Spill Prevention:**

- During the construction phase, will ensure that on pad compaction is adequate as to serve as a secondary barrier to protect shallow groundwater and prevent the migration of spills or leaks to shallow groundwater. In order to prevent incidental spills from impacting groundwater a liner will be placed beneath the rig during drilling. During completions secondary containment (liners) will be in place for heavy equipment, transfer manifolds and tanks (excluding fresh water tanks).

\* The Dust mitigation BMP states: "Water will be placed on dirt access roads to mitigate dust as needed. *If feasible*, magnesium chloride will also be used as needed on access roads to further abate dust." The "*If feasible*" qualifier is a little more open ended than we'd like. Can this be removed?

**Yes, please remove**

\* The 803. Lighting mitigation BMP states: "*To the extent practicable*, site lighting shall be shielded and directed downward and inward towards operations to avoid glare on public roads and nearby Building Units." The "*To the extent practicable*" qualifier is a little more open ended than we'd like. Can this be removed?

**Yes, please remove**

\* The Odor mitigation BMP states: "KMG will comply with the provisions of 805b *as deemed applicable*. Additional BMPs for the Prowant 4-18HZ location ...". The "*as deemed applicable*" qualifier is a little more open ended than we'd like. Can this be removed?

**Yes, please remove**

\* There appear to be Building Units within 1,500 feet in all four cardinal directions of this location. Will KMG revise the 604.c.(2)A - Noise mitigation BMP to address the placement of sound mitigation barriers (e.g. straw bales, sound walls) on all four sides of the pad?

**604c.(2).A. Noise: Sound surveys have been conducted on each rig type and are**

**utilized to anticipate any additional effective noise mitigation once a drilling rig is determined. At a minimum, and pending a safety review after construction of the location, sound mitigation barriers (sound walls) will be placed around the entire perimeter of the pad location to dampen noise and minimize impact to the nearby residences and to Weld County Roads 13 and Larimer CR 1 during drilling and completions. Should technological advancements allow for better noise mitigation at the time of drilling and completion operations on this location, Kerr-McGee will re-evaluate the most effective method at that time.**

\* I see that the nearest Building Unit is owned by Anadarko. Please confirm if the nearest Building Unit is currently unoccupied and if it will remain so during well drilling and completion operations.

**The nearest building unit is currently vacant and remain vacant until development is finished**

\* This location is within 1,500 feet of Windsor, Johnstown, and Larimer County. I have an earlier correspondence with KMG that indicates Larimer County was notified during the WOGLA process and had no comments. Has KMG been in contact with Johnstown and Windsor to see if they had any concerns with this oil and gas location in proximity to them?

**The Town of Windsor was contacted on 9/19/19 via email to advise of the proposed oil and gas development for the Damore wells and production facility. No comments received from the Town of Windsor.**

**The Town of Johnstown was contacted on 9/26/19 via email to advise of the proposed oil and gas development for the Damore wells and production facility. No comments received from the Town of Johnstown.**
