On February 6, 2019 the Stromberger 13-32 location was sampled to investigate for potential impacts subsequent to a produced water vessel removal, in accordance with COGCC Rule 905b. All but one sample collected were below COGCC Table 910-1 standards. Soil sample #2 @ 3ft exceeded table 910-1 for SAR. Eagle Environmental returned to location and collected additional soil samples defining vertical and horizontal elevated inorganic values.

Description

	Soil sample analytical results indicate that the Sodium Adsorption Ratio (SAR) and pH of soil in the vicinity of the historic tank battery is above the Table 910-1 Allowable Level of 12 and 8-9 respectively. Electrical conductivity (EC) of soil appears to comply with the Table 910-1 levels. Additionally, BTEX and total petroleum hydrocarbons of the soil are in compliance with the Table 910-1 Allowable Levels. Therefore, COGCC will not require further action at this time. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if groundwater or surface water is found to be impacted, then further investigation and/or remediation activities may be required
