Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	10' x 20'	standing liquid at time of spill and soil staining

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On November 6, 2019 DCP Operations removed standing liquid condensate and impacted soils. Impacted soils were stored in an environmental roll-off to be transported to disposal facility at later date. Soil Samples were collected on November 15, 2019 and delivered to Origins Laboratory.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Soil Samples will be grab collected from around the perimeter of the impacted soils area and from within the excavated area to determine delineation of the impacted soils.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Ground water has not been impacted.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Surface water has not been impacted.

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Volume of liquid waste (barrels)

☐ Is further site investigation required?

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Hydrovac activities are being conducted to remove impacted material from around process equipment and piping. In some areas hand removal is required.

REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Initial soil removal on November 6, 2019 was conducted using shovels and other equipment due to the spill location near process equipment and piping. Soil samples were collected on November 15, 2019 and submitted to Origins Laboratory for analysis. Results of the analysis determined that soils were still impacted. On December 11 and 12, 2019 a hydrovac was utilized to remove 6 inches of soil in the impacted area. Soil samples were collected December 12, 2019 and submitted to Origins Laboratory for analysis. Results of the analysis determined that some areas of the spill site still contained impacted material and additional excavation will be required. A hydrovac is scheduled for January 13, 2020 to remove additional soils as required. During the excavation of January 13, 2020, a hand held PID (photoionization detector) will be utilized for onsite screening prior to sample collection and submittal. It is DCP's goal to remove all remaining impacted soils during the January 13, 2020 excavation activities. NFA will be submitted following receipt of laboratory analysis results.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Spill location is an active gas processing plant. Grading will be returned to that prior to excavation and gravel will be added as required.

Is the described reclamation complete? _____

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim? ☐ Final?

Did the Surface Owner approve the seed mix? _____

If NO, does the seed mix comply with local soil conservation district recommendations? _____
