Hi Eric,

I have changed the BOC to the casing cut at 835' for the stub plug because we have not had good luck with getting back into production casing of slimhole wells.

Thank you,

Kaylie Milam

Hello Eric,

-

We plan on deepening the casing cut to 1500' to remediate bradenhead pressure. We will the split the stub at 1500', WOC 8 hours, and verifying that there is no pressure or fluid migration before pumping across the shoe. Please let me know if you have any questions or concerns with this plan.

-

Best,

-
