**General Comment:**COGCC Inspection Report Summary.On 1-22-2020 at approximately 9:30, 13:15, and 17:30, inspector Rick Moran, conducted a routine inspection at Equity Oil well McLaughlin 64 in Rio Blanco county.No corrective actions were identified.Note: As part of determining if the well needs additional plugging, the operator excavated down 5' around the well head head. The COGCC inspection on 9-18-2007 referenced "gas is hissing around concrete around A/G pipe".During this inspection a gas collection bag was placed around the top of the casing for an overnight measurement to determine if a measureable volume of gas could be collected. 4.25 hours after the bag was placed no noticable gas filling of the bag had occurred.The 2020 surveyor determined the actual location is 40.09181826, -108.85899020 .Chevron injection well 103-07604 was plugged in February 2000 and is located 450' west of this well. Both wells are located in a known fracture zone associated with the Chevron main field fault. Referenced in several papers including C.B. Raleigh, et al in 1972.This is a summary of inspection report 679707045.
