1.0 INTRODUCTION

This Third Quarter 2019 Site Monitoring and Remediation Summary Report (Report) presents the results of groundwater sampling activities and operational information for the air sparge (AS) and soil vapor extraction (SVE) remediation system at the Feather 31-15 site (Site).

Field activities detailed in this report were performed by Tasman Geosciences, Inc. (Tasman), on behalf of Noble Energy, Inc. (Noble), in order to further evaluate groundwater conditions and conduct remediation activities at the Site. The data collected were used to develop the analytical summary tables, groundwater elevation map, benzene concentration map presented herein, optimize the remediation System operations and to evaluate emissions versus Colorado Department of Public Health and Environment (CDPHE) Air Pollution Control Division Air Pollution Emission Notice (APEN) requirements.

1.1 Site Background

The Site is located approximately 2.07 miles north-northwest of Keenesburg in Weld County, Colorado (Figure 1). Surrounded by agricultural crop land, the Site legal description is the northwest 1/4 of the northeast 1/4 of Section 15, Township 2 north, Range 64 west, of the 6th Principal Meridian. The Site is located on relatively flat terrain that slopes gradually to the north-northeast. The Site is approximately 3,500 feet (ft.) east of County Road 55 and approximately 380 ft. north of the Feather 31-15 wellhead, and has coordinates of 40.145495°, -104.534330°.

On February 3, 2016, Noble discovered a leak from the Feather 31-15 produced water tank. Subsequently, Noble filed a Form 19 Initial Spill/Release Report (Form 19) with the Colorado Oil and Gas Conservation Commission (COGCC) for the incident (Document # 400983708). The Form 19 was received by the COGCC and the incident was designated Spill/Release ID # 444673.

Soil and groundwater assessment activities were conducted at the Site on January 26, 2016. Tasman advanced nine soil borings (BH01-BH09) and converted two borings to groundwater monitoring wells (BH03 and BH08) around the tank battery, as illustrated on Figure 2. Based on data gathered during assessment activities, impacted soil excavation was completed on March 2 and 3, 2016.

During excavation activities, monitoring well BH03 was destroyed. From August 28, 2016 through December 21, 2016, Tasman returned to the Site to install forty-six monitoring wells to further delineate dissolved phase impacts to groundwater. Analytical results for soil and groundwater samples collected during site assessment activities were previously reported to Noble in a Site Assessment and Excavation Report submitted on February 13, 2017. A Form 27 pertaining to remediation activities at the Site was received by the COGCC on April 3, 2017, and document number 401249112 and remediation project number 10120 were assigned to the Site.

1.2 Site Topography, Geology, and Hydrogeology

The Site is situated approximately 4,961 feet above mean sea level (ft. amsl). Surface topography across the Site slopes gently to the north.

Site assessment soil borings indicate that the subsurface geology immediately beneath the Site is composed of medium density, well graded sand and clayey sand, underlain by stiff, inorganic, lean clay underlain by fat clay.

Groundwater was encountered at a range of approximately 7 ft. below ground surface (bgs) to 14 ft. bgs during monitoring well installation. Historic groundwater monitoring data indicates that the groundwater potentiometric surface flows toward the northeast.

2.0 THIRD QUARTER 2019 GROUNDWATER MONITORING ACTIVITIES

Third Quarter 2019 groundwater monitoring activities were performed at the Site on July 30, 2019 and July 31, 2019. The activities included measurement of groundwater levels and collection of groundwater samples from all 49 Site groundwater monitoring wells.

2.1 Groundwater Level Measurements

Both general procedures and significant observations for the groundwater gauging activities performed during the Third Quarter 2019 groundwater monitoring event are presented in the following sections.

General Procedures

Groundwater and light non-aqueous phase liquid (LNAPL) levels are gauged quarterly in order to evaluate hydraulic characteristics and to provide information regarding seasonal and annual fluctuations in groundwater elevations at the Site. During the Third Quarter 2019 groundwater monitoring event, groundwater and LNAPL levels were gauged at 49 monitoring well locations. Monitoring well BH44 was obstructed and was not able to be gauged or sampled. Groundwater and LNAPL elevation measurements are presented in Table 1.

Groundwater and LNAPL levels are measured on the north side of the well casing to the nearest 0.01-foot using an oil-water interface probe (IP). Groundwater level data were subsequently converted to elevations (ft. amsl) by subtracting the measured depth-to-water (DTW) from the well's top-of-casing (TOC) elevation survey datum. DTW data for wells containing LNAPL was converted to elevation by using the assumed LNAPL density of 0.75 times that of water. The formula used is presented in Table 1.

Significant Observation

During the Third Quarter 2019 groundwater monitoring event, the groundwater elevation at the Site ranged from 4,936.41 ft. amsl in BH53R to 4,954.78 ft. amsl in BH13. The groundwater potentiometric surface at the site slopes to the northeast, with a hydraulic gradient of approximately 0.04 feet per foot between wells BH13 and BH53R. Groundwater elevation contours and the inferred flow direction are illustrated on Figure 3. LNAPL was not measured in any of the Site monitoring wells during the Third Quarter 2019 monitoring event.

2.2 Groundwater Purging and Sampling

This section summarizes both general procedures and significant observations from the groundwater purging and sampling activities conducted on July 30, 2019 and July 31, 2019. During the Third Quarter 2019 groundwater monitoring event, groundwater samples were collected from 49 of the 50 wells in the Site monitoring well network.

General Procedures

Prior to collecting groundwater samples, groundwater levels were measured at each of the Site monitoring wells, as described above. The presence of LNAPL was also evaluated using an IP. Subsequently, a minimum of three casing volumes of groundwater (calculated from total well depth and groundwater level measurements) was purged from the each well prior to collecting a groundwater sample.

Groundwater samples were collected using dedicated, disposable, polyethylene bailers. Samples were placed in clean laboratory-supplied containers for the selected analytical method, packed in an ice-filled cooler, and kept at approximately 4 degrees Celsius for transportation to the laboratory.

Groundwater samples were submitted under standard chain-of-custody procedures to Summit Scientific Laboratory in Golden, Colorado for analysis of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using United States Environmental Protection Agency (USEPA) Method 8260B.

3.0 THIRD QUARTER 2019 GROUNDWATER SAMPLING RESULTS

This section presents the laboratory analytical results for groundwater samples collected during the Third Quarter 2019 groundwater monitoring event. Groundwater laboratory analytical data is presented in Table 2 and illustrated on Figure 4. The complete laboratory analytical reports are provided in Attachment A. A summary of the groundwater laboratory analytical data collected by Tasman is presented below:

- Benzene was detected above the COGCC Table 910-1 groundwater standard of five micrograms per liter ($\mu\text{g/L}$) in four of the 49 monitoring wells sampled (BH16, BH19, BH23R2 and BH24). Benzene concentrations associated with these four monitoring wells ranged from 36 $\mu\text{g/L}$ in BH19 to 6,100 $\mu\text{g/L}$ in BH16. Isoconcentration contours for benzene concentrations detected above the COGCC Table 910-1 groundwater standard during the Third Quarter 2019 sampling event are illustrated on Figure 4.
- Toluene was detected above the COGCC Table 910-1 groundwater standard of 560 $\mu\text{g/L}$ in one of the 49 monitoring wells sampled. BH16 had a toluene concentration of 2,400 $\mu\text{g/L}$.
- Ethylbenzene was not detected above the COGCC Table 910-1 groundwater standard of 700 $\mu\text{g/L}$ in any of the 49 Site monitoring wells sampled.
- Total xylenes were detected above the COGCC Table 910-1 groundwater standard of 1,400 $\mu\text{g/L}$ in two of the 49 Site monitoring wells sampled. Total xylenes concentrations ranged from 1,700 $\mu\text{g/L}$ in BH24 to 5,900 $\mu\text{g/L}$ in BH16.

4.0 REMEDIATION SYSTEM

This section summarizes the installation and operational data for the AS/SVE remediation system (System) that is currently in operation at the Site. The System is shut down a minimum of one week prior to quarterly sampling events to allow for normalization of Site groundwater levels.

4.1 AS/SVE Remediation System Installation

Between November 14 and 29, 2017, Tasman retrofitted eight monitoring wells for use as AS wells and 13 for use as SVE wells as part of the System. The most current AS/SVE remediation well network in use is illustrated on Figure 4. The remediation wells are connected to the System remediation equipment via above ground conveyance lines. The System remediation equipment is housed in a trailer that was placed along the southern end of the Site. From May 16 through May 17, 2019 Tasman guided the installation of five dedicated air sparge wells in the northern part of the site (Figure 4). These air sparge wells will be tied into the System prior to System restart after the second quarter 2019 groundwater monitoring event.

4.2 AS/SVE Remediation System Operations

Full-time operation of the AS System was initiated on December 4, 2017. On January 5, 2018, the SVE component of the System was initiated. The system remained off from April 10 through June 30, 2019 while waiting for new equipment to optimize system operations and for point of compliance monitoring wells and air sparge wells to be installed to the northeast. The system was restarted on July 1 2019. From July 1 through August 12, 2019 the System SVE wells were operated at an average flow rate of 78.87 cubic feet per minute (cfm) at an average vacuum of 107.75 inches of water. The AS wells operated at an average pressure of 18.17 pounds per square

inch (psi), and an average flow rate of 75 cfm. During this period the System operated with an average uptime of 100%.

A remediation system air emission analytical sample was collected on July 23 and August 12, 2019 and submitted to Origins Laboratory in Denver, Colorado for analysis of BTEX and total petroleum hydrocarbons – gasoline range organics (TPH-GRO) by USEPA Method TO-15. Laboratory analytical results for these samples are summarized in Table 3. This laboratory data is used to calculate System effluent emission mass calculations. Tasman will continue to collect emission samples through the end of 2019 to monitor emissions and System operations. As detailed in Table 3, as of August 12, 2019, approximately 1.60 pounds of volatile organic compounds (VOCs) has been emitted by the System since startup. Approximately 1.27 pounds of BTEX and TPH-GRO has been emitted during 2019. Based on the air emission data collected to date, an air pollution emission notice (APEN) is currently not required as part of the System operations.

Charts 1 and 2 illustrate the periodic and total mass of VOCs removed by the System since operations were initiated.

5.0 UPCOMING SITE ACTIVITIES

Anticipated upcoming Site activities included the following:

- Complete the Fourth Quarter 2019 groundwater sampling event in November; and
- Continue operations and maintenance of the remediation system; and
- Continue monthly effluent sampling of remediation system emissions

Notes:

ft. = Feet

AMSL = Above mean sea level

BTOC = Below top of casing

LNAPL = Light non-aqueous phase liquid

ND = No LNAPL detected

NM = Not measured

NS = Not surveyed

Monitoring wells MW-01 through MW-06 were destroyed during site excavations

* Groundwater elevation was corrected for product thickness (when present) using the following calculation:

Groundwater elevation=(TOC Elevation-Measured Depth to Water)+(LNAPL Thickness in WellxLNAPL Relative Density)

LNAPL relative density was assumed to be approximately 0.75

1. Sheen present on groundwater.

2. Cattle damaged monitoring well prior to the 3Q2017 sampling event, resulting in lost casing elevation.

3. Obstruction present in well on 7/30/2019. Obstruction could not be removed on 7/31/2019 but was able to be dislodged enough to access groundwater, purge 1 gallon and collect a groundwater sample.

4. Depth to water measurements collected prior to third quarter 2019 were measured from top of well casing. Subsequent measurements were collected from top of casing and adjusted using survey data to reflect depth of water from ground surface.

RE: Noble - Feather 31-15

Work Order # 1907371

Enclosed are the results of analyses for samples received by Summit Scientific on 07/30/19 17:30. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink on a light blue background. The signature is cursive and reads "Muri Premier".

Shipped Via: H.D./P.U./FedEx/UPS/USPS/Other _____ Airbill #: _____

☐ ☒ ☐ ☐ ☐

Matrix (check all that apply): ☐ Air ☐ Soil/Solid ☒ Water ☐ Other: _____
(Describe)

Temp (°C)	5.4
-----------	-----

Thermometer ID: 61857155-K

	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature at 4°C +/- 2°C ⁽¹⁾ ? NOTE: If samples are delivered the same day of sampling, this requirement is met provided that there is evidence that cooling has begun.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	On Ice
Were all samples received intact ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Was adequate sample volume provided ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
If custody seals are present, are they intact ⁽¹⁾ ?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Are samples with holding times due within 48 hours sample due within 48 hours present?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Is a chain-of-custody (COC) form present and filled out completely ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
Is the COC properly relinquished by the client w/ date and time recorded ⁽¹⁾ ?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
For volatiles in water – is there headspace present? If yes, contact client and note in narrative.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Are samples preserved that require preservation (excluding cooling) ⁽¹⁾ ? Note the type of preservative in the Comments column – HCl, H2SO4, NaOH, HNO3, ect	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
If samples are acid preserved for metals, is the pH ≤ 2 ⁽¹⁾ ? Record the pH in Comments.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
If dissolved metals are requested, were samples field filtered?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

Additional Comments (if any):

⁽¹⁾ If NO, then contact the client before proceeding with analysis and note in case narrative.

Project Number - [none]

Attached are your analytical results for Noble - Feather 31-15 received by Origins Laboratory, Inc. July 23, 2019. This project is associated with Origins project number Y907357-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Project Number - [none]

Attached are your analytical results for Noble - Feather 31-15 received by Origins Laboratory, Inc. August 12, 2019. This project is associated with Origins project number Y908193-01.

The analytical results in the following report were analyzed under the guidelines of EPA Methods. These methods are identified as follows; "SW" are defined in SW-846, "EPA" are defined in 40CFR part 136 and "SM" are defined in the most current revision of Standard Methods For the Examination of Water and Wastewater.

The analytical results apply specifically to the samples and analyses specified per the attached Chain of Custody. As such, this report shall not be reproduced except in full, without the written approval of Origin's laboratory.

Unless otherwise noted, the analytical results for all soil samples are reported on a wet weight basis. All analytical analyses were performed under NELAP guidelines unless noted by a data qualifier.

Any holding time exceedances, deviations from the method specifications or deviations from Origins Laboratory's Standard Operating Procedures are outlined in the case narrative.

Thank you for selecting Origins for your analytical needs. Please contact us with any questions concerning this report, or if we can help with anything at all.

Shipped Via: HD

(UPS, FedEx, Hand Delivered, Pick-up, etc.)

Date/time completed: 8/13/2019

Airbill #: N/A

Matrix(s) Received: (Check all that apply): Soil/Solid Water X Other: Air
(Describe)

Cooler Number/Temperature: 1 / - °C / - °C / - °C / - °C

Thermometer ID: T003

Requirement Description	Yes	No	N/A	Comments (if any)
If samples require cooling, was the temperature between 0°C to ≤ 6°C ⁽¹⁾ ?		<input checked="" type="checkbox"/>		<u>Air</u>
Is there ice present (document if blue ice is used)		<input checked="" type="checkbox"/>		
Are custody seals present on cooler? (if so, document in comments if they are signed and dated, broken or intact)		<input checked="" type="checkbox"/>		
Are custody seals present on each sample container? (if so, document in comments if they are signed and dated, broken or intact)		<input checked="" type="checkbox"/>		
Were all samples received intact ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Was adequate sample volume provided ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Are short holding time analytes or samples with HTs due within 48 hours present ⁽¹⁾ ?		<input checked="" type="checkbox"/>		
Is a chain-of-custody (COC) present and filled out completely ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Does the COC agree with the number and type of sample bottles received ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Do the sample IDs on the bottle labels match the COC ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
Is the COC properly relinquished by the client with date and time recorded ⁽¹⁾ ?	<input checked="" type="checkbox"/>			
For volatiles in water – is there headspace (> ¼ inch bubble) present? If yes, contact client and note in narrative.			<input checked="" type="checkbox"/>	
Are samples preserved that require preservation and was it checked ⁽¹⁾ ? (note ID of confirmation instrument used in comments) / (preservation is not confirmed for subcontracted analyses in order to insure sample integrity)/(pH <2 for samples preserved with HNO ₃ , HCL, H ₂ SO ₄) / (pH >10 for samples preserved with NaAsO ₂ +NaOH, ZnAc+NaOH)			<input checked="" type="checkbox"/>	
Additional Comments (if any):				

⁽¹⁾If NO, then contact the client before proceeding with analysis and note date/time and person contacted as well as the corrective action to in the additional comments (above) and the case narrative.
