## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Unlined, earthen pit will be excavated until potential soil contamination has been removed based on analytical results.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Area around skimming pit will be excavated to remove potentially impacted soil. Extent of vertical and horizontal contamination boundaries will be defined based on field screening results with PID and analytical results of collected grab samples. Further site investigation and remediation efforts will begin early May of 2018.
