During frac, Bradenhead pressure for treatment well, and wells offset within 300', will be monitored for a rise in pressure 200psig over baseline pressure  
If Bradenhead pressure greater than 200psig over baseline is observed on treatment well, or a well within 300', stimulation operations will be suspended and the event will be reported on a Form 42  
Pressure will be managed and communicated to COGCC staff prior to proceeding with stimulation operations
