COMMENTS:

PDC requests to add topsoil staging area to this location as shown on the attached Scaled Facility Drawing. Additionally, we will be decreasing the size of the MLVT area. The total disturbed area will decrease from 14.7 to 14.6 acres. Post-reclamation acreage will remain unchanged. PDC would also like to change the following production equipment due to the use of surge vessels: Oil tanks: 12, Surge Vessel: 1, Electric Generator: 1, Electric Instrument Air Compressors: 2, Separators: 13, Meters: 2
All cultural distances will remain the same as previously permitted.

H2S REPORTING

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million) Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____

Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	Storm Water/Erosion Control	This Stormwater Management Plan contains required elements associated with PDC's construction activities, as defined in the CDPS General Permit for Stormwater Discharges Associated with Construction Activity, Authorization to Discharge Under the Colorado Discharge Permit System (Permit No. COR-030000, re-issued and effective July 1, 2007).BMPs for sediment and erosion control will be accomplished through a combination of construction techniques, vegetation and re-vegetation, administrative controls, and structural features.
2	Construction	The topsoil will be segregated, stockpiled, and protected from degradation due to contamination, compaction, and, to the extent practicable, from wind and water erosion during drilling and production operations so that subsequent reclamation will be facilitated. Topsoils will be compacted and crimped to protect from reeling and will be protected from offsite runoff with a ditch and a berm.
3	Interim Reclamation	In accordance with COGCC Rules, the disturbed area will be monitored for noxious weed infestations during all drilling, production and reclamation operations. These areas will be kept free of all undesirable plant species designated to be noxious weeds, as practicable. Weed control measures shall be conducted in compliance with the Colorado Noxious Weed Act, C.R.S. 35-5.5-115 and the current rules pertaining to the administration and enforcement of the Colorado Noxious Weed Act. Weeds will be mowed and sprayed if necessary.
