An initial form 19 supplemental was submitted on 10/25/2019 (Document #402222077)  
On 10/13/2019 ~6:30 AM lease operator discovered the manifold on a produced water tank had frozen and broke causing the Produced water to release. All tanks were locked out until all repairs to the manifold are complete. The impacted soil was removed through excavation activities. After excavation activities were completed, confirmation soil samples were collected from the excavation and submitted for laboratory analysis. (COGCC Table 910-1). See Table 1 and Site Map for sampled areas

**OPERATOR COMMENT**

For Review by Hohn Heil:

Prior to placing the tank battery back into service, 6 discrete soil samples were taken from under the liner inside the secondary containment. Sample #1 and #4 are above the 910-1 standards, see Table 1 page 2. XTO Energy will be dismantling all supporting infrastructure from the tanks, lifting all tanks out of containment area and removing the entire liner. At this point, we will begin excavating contaminated soil until we reach a depth and point to resample. Additional 910-1 compliance samples will be taken at this point. When approved 910-1 samples are obtained, XTO Energy will import the applicable amount of clean fill, install a new liner and set two of the six tanks back in containment.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
