Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

we had a recent spill from the pit at the Lorencito 7-7-34-66( Facility ID # 258377 ) on 1/2/2020 at 2pm. Produced water was released from the discharge pipe at the Lorencito 005 outfall #005-47776. The pit level rose to the discharge pipe that was not capped to prevent discharge. The water flowed to the north east where it briefly entered a dry drainage that is considered waters of the state. It did not flow down the arroyo but did pool into a puddle at the entrance. It is estimated at this time that 11 bbls was released. The lease operator immediately isolated the spill. Further investigation and repairs were started upon discovery. A call was made to the CDPHE on 1/2/20 (Ann Nedro) report number 2020-002.
