

## **Emerald 45 Well Location Weed Plan**

**It has been brought to our attention there is a Noxious weed problem of Russian Knapweed on a well pad location on Chevron Property in Rangely CO.**

**Russian Knapweed is an aggressive hard to kill weed and will take several years to eradicate.**

**This Spring of 2020 we will walk area and try to cut and bag all seed heads and remove from site to be burned.**

**Later in the Spring all knapweed in the area will be sprayed with preferred Chemical called Milestone.**

**Later in the Fall around late August the area will be monitored and sprayed again.**

**Hopefully by 2021 we will have it knocked way back and can be monitored and sprayed accordingly every year to keep it killed.**

**The main objective right now is to isolate it and keep it from spreading.**

**I have dealt with Russian Knapweed quite a bit in the last 20 years, mainly in the Piceance Creek Basin and we feel confident we can get a handle on this.**
