#### Check if impacted or threatened by spill/Release (please answer Yes/No to all that apply):

Waters of the State  Residence/Occupied Structure  Livestock  Public Byway  Surface Water Supply Area

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A leak from a Vapor Recovery Unit resulted in the release of approximately 2 gallons of oil. The release was contained on site with the exception of less than a 1/2 gallon of oil that accumulated on the surface of the snow in a dry irrigation ditch running along the north perimeter of the tank battery. No injuries occurred as a result of the release and cleanup was accomplished on 3/21/20, immediately following discovery, using hydrovac equipment.

Additional Spill Details Not Provided Above:

On March 23, 2020, a hydrovac was used to remove melted snow from the irrigation ditch bottom and potentially impacted roadbase in the release area. Following hydrovac activities, Olsson collected two confirmation soil samples from the ditch bottom and two confirmation roadbase soil samples from the release area. During sampling activities, visual and olfactory observations were made and a photoionization detector (PID) was used to screen soil samples. The two irrigation ditch samples were collected from the top 3 inches of exposed soil in the bottom of the ditch and the release area samples were collected from 0 inches to 3 inches below ground surface with clean hand auger equipment decontaminated between sample points. The samples were submitted to Origins Laboratory in Denver, CO for analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), total petroleum hydrocarbon (TPH)- gasoline range organics (GRO), and TPH- diesel range organics (DRO). Concentrations of BTEX, TPH-GRO, and TPH-DRO were either not reported at or above laboratory detection limits or were reported below their respective COGCC Table 910-1 concentration levels. Concentrations of TPH-GRO and TPH-DRO were added to calculate TPH. TPH concentrations were reported at 9.93 milligrams per kilogram (mg/kg) in sample SharpDitch-01, which is below the Table 910-1 concentration level of 500 mg/kg. Groundwater was not encountered during sampling activities. See the attached Figure 2 for the confirmation soil sample locations and the attached Table 1 for a summary of confirmation soil sampling analytical results. A copy of the laboratory analytical report is also attached.
