### **Best Management Practices**

<b><u>No</u></b>	<b><u>BMP/COA Type</u></b>	<b><u>Description</u></b>
5	Drilling/Completion Operations	Operator will conduct daily leak and spill inspections during drilling activities. After site interim reclamation is completed, there will be routine site inspection done per CDPHE schedule as required due to any storm events and monthly at a minimum.
5	Material Handling and Spill Prevention	Operator will install a 30mil Liner, set under main rig fuel tank and mud storage tanks for containment of any possible spills. These will be inspected daily while rig is onsite.
5	Storm Water/Erosion Control	A diversion ditch will be constructed around the perimeter, with sediment traps in each corner of the pad. Outside of the ditch, a well compacted berm will also be constructed. Outlet protection will be provided by straw wattles installed around sediment trap discharge points. Surface roughing of the topsoil pile will be performed perpendicular to slope, and the topsoil pile will be seeded. Vehicle trackout control measures will be installed along the access road to CR 45. Silt fence will be installed between the south side of the access road and the north of the adjacent ditch, starting at CR 45 and extending ~450' east.
5	Construction	Sound walls (32' high) will be installed completely on the south side and for 200 feet on the west side starting in the SW corner going north.
5	Drilling/Completion Operations	Light sources during all phases of operations will be directed downwards and away from occupied structures. Once the drilling and completion rigs leave the site, there will be no permanently installed lighting on site.
