INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Old blowdown pit not in use was discovered in COGCC Field Inspection for the Dry Creek 3-22 (API 05-107-06063). Will test and close pit in Spring 2020. If analytical results exceed COGCC Table 910-1 thresholds, we will determine best way to clean or dispose at that time.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Upon consultant recommendation, possibly will be doing an adequate number of Discrete Samples to be analyzed for the entire Table 910-1 constituents to characterize the aerial and vertical extent of the blowdown pit. Based on photos, estimating pit is 10' x 10' x 2' deep. Possibly also doing one comparative background sample of a non impacted area, all to be compared to the Table 910-1 checking for exceedences. (Delayed due to winter weather). See attached draft sample location map. Actual map will be provided by consultant when work is completed.

UPDATE 03/03/2020: Unable to begin due to weather. Anticipate Spring 2020.

UPDATE 04/11/2020: In this unprecedented time, Robert L. Bayless, Producer (RLB) is requesting delaying work on the following projects until we are able to perform it safely and economically. We are estimating to resume in 2021.
