BRADENHEAD TEST REPORT

Step 1. Record all tubing and casing pressures as found. Step 2. Sample now. If intermediate or surface casing pressure > 25 psi. In sensitive areas, 1 psi.
 Step 3. Conduct Bradenhead test. Step 4. Conduct intermediate casing test. Step 5. Send report to BLM within 3 days and to OGCC within 10 days. Include wellbore diagram if not previously submitted or if wellbore configuration has changed since prior program. Attach gas and liquid analyses if sampled.

BRADENHEAD TEST

Buried valve? ☒ Yes ☐ No
 Confirmed open? ☐ Yes ☒ No
 With gauges monitoring production, intermediate casing and tubing pressures, open surface casing (bradenhead) valve (if no intermediate casing, monitor only the production casing and tubing pressures.) Record pressures at five minute intervals Define characteristics of flow in "Bradenhead Flow" column using letter designations below:
 O = No Flow; C = Continuous; D = Down to 0; V = Vapor
 H = Water H2O; M = Mud; W = Whisper; S = Surge; G = Gas

Instantaneous Intermediate Casing PSIG at end of test: >

Comments: This well was completed in 1925. In an attempt to plumb for BH testing, 8' of surface pipe was exposed (pictures attached). Located what might be the surface head but hole was too deep to safely put a man in it and additional work would have de stabilized the pumping unit base. Due to the low reservoir pressure of the producing formation (280 psi @ 4369') there is very little risk of environmental damage to the health and safety of the public. Respectfully request excluding this well from the bradenhead testing requirements.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
