Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On 4/23/2020 a lease operator noticed that the tank levels were different than previously gauged. It is estimated that 11 barrels of condensate was released from a small hole near the bottom of the tank. The tank was located inside of an earthen berm. The tank is scheduled to be removed from service and the location. Once the tank is removed, delineation of the release will take place.
