Steven,

Upon review of COGCC spill document number 2222073, Caerus determined the spill was approximately 7 barrels of drilling mud spilled onto the location surface. Sampling activities were outlined as attachments to the Initial Form 19, but supplemental forms were not submitted to include the laboratory analytical results. Caerus is providing the results of the sampling event which demonstrates compliance with COGCC Table 910-1 standards except for pH, please see the attached lab report and tabulated laboratory data. To address the elevated pH concentration found on the active pad surface, Caerus requests relief under FAQ 32 consideration found on the attached narrative.

Location	COGCC Location ID	Field - Route	Remediation Type: (briefly describe the E&P material)	Facility/Spill ID	Form 19 Submittal Date	Historic Spill DOC# relating	BBL Lost	Remediation / Compliance Status Notes / Notes on Permit Requirements and Submittals Responsible for Document Prep - Due Date
J16W	334641	Mamm	SPILL	045-10486	1/6/2012	2222073		

Based on the sampling notes, laboratory analytical results, and FAQ 32 consideration, Caerus requests closure of COGCC Spill Document Number 2222073. Please let me know if you have any questions regarding the provided information.

Thank you,

Blair Rollins
