Check if impacted or threatened by spill/Release (please answer Yes/No to all that apply):

Waters of the State Residence/Occupied Structure Livestock Public Byway Surface Water Supply Area

As defined in COGCC 100-Series Rules

Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

Approx. 1-3 bbls. slight surface water, it is a 3" SDR 11 poly line 4710 Hard rosin. Line was isolated and a vac truck was used to removed all surface water and sucked the line dry. Line will be repaired with electro fusion collars on Monday April 25th. We don't know the reason for the failure yet, however, we do know it is not an over pressuring issue as this line runs between 75-85 psig and is monitored daily. After reason for failure has been determined, measures will be taken to prevent future failures. The last failure within this system was October of 2015. Soil samples were taken and will be sent to the lab Monday. Affected area was approx. 2' long and 2' wide.
