# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Excavation of Cell 2 to remove soils above the COGCC Table 910-1.

## REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

The purpose of this workplan is to describe the activities to remove impacted soils from Cell 2 and request closure for the Landfarm. Hydrocarbon contaminated soil has not been added to Cell 2 since September 2014 and based on analytical data collected, both TPH and arsenic concentrations in soil are above COGCC Table 910-1 concentration levels. Due to the relatively high concentrations of TPH and arsenic remaining in Cell 2, Chevron has decided to remove Cell 2 through excavation and offsite disposal. This workplan describes the soil excavation and confirmation sampling proposed to remove Cell 2 and request closure of the Landfarm.

Prior to the excavation, three (3) monitoring wells (MW-48R, MW-49, and MW-50) will be properly abandoned per State of Colorado rules and regulations for water well construction, pump installation, cistern installation, and monitoring and observation hole/well construction (2 Code of Colorado Regulations [CCR] 402-2). Groundwater samples collected at the Landfarm monitoring wells have never exceeded COGCC 910-1 Concentrations Levels since installed.

All soils will be excavated to the vertical extent of impacted soil within Cell 2, approximately three (3) to five (5) feet below ground surface (bgs), and directly loaded into trucks for transportation to the Wray Gulch Landfill for disposal. The excavation will begin where Cell 1 excavation activities ended (Figure 1). Following soil excavation, up to nine (9) confirmation soil samples will be collected. Waste manifests will be collected for the final documentation report and submitted on a supplemental eForm 27 when project closure is requested.
