Comment:

Since the previous inspection on 9/5/2018, Operator has removed all oil and gas equipment, re-contoured the location, and performed final reclamation activities with the evidence of reference area grass species (Cereal rye). The establishment of Cereal rye does not appear to be reflective of reference areas; therefore, this location will remain in-process.

At the time of this inspection, a List B Colorado noxious weed, Scotch thistle, was observed throughout portions of the location. There were observed shoots so plants will eventually flower and spread seed if not controlled and managed. Refer to the attached inspection photos.

Corrective Action: **Comply with Rule 1004 to control and manage all noxious weeds.** Date **06/18/2020**

Overall Final Reclamation **Fail** Well Release on Active Location Multi-Well Location

COGCC Comments

Comment	User	Date
COGCC staff, Chris Binschus, contacted and communicated to an Operator representatives, Paul Herring, the observations from the field inspection. Staff noted there was other noxious weeds at the western entrance of location that should also be controlled as it could a potential source of weed seeds in the future.	binschusc	06/04/2020
