## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Refer to Rules 340, 905, 906, 907, 908, 909, and 910

## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	GROUNDWATER	Refer to Figure 1 and Table 2	Groundwater Sampling
Yes	SOILS	Refer to Figure 1 and Table 1	Confirmation Soil Sampling

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On May 29, 2020, confirmation sampling was conducted below the produced water vessel during facility decommissioning at the Anderson 11-13 tank battery. Groundwater was encountered below the vessel at approximately 4 feet below ground surface (bgs). No soil was removed from the excavation.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Due to the presence of groundwater, five confirmation soil samples (SS01 – SS05) were collected from the sidewalls and saturated base of the excavation area at 3 feet and 4 feet bgs, respectively. Soil samples were submitted for laboratory analysis of benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) by EPA Method 8260B, TPH – diesel range organics (DRO) by EPA Method 8015, pH by EPA Method 9045D, and electrical conductivity (EC) by EPA Method 120.1. Analytical results indicated that organic compound concentrations were below COGCC Table 910-1 standards in all five soil samples, however pH levels were in exceedance of the COGCC standard. Soil analytical data is summarized in Table 1.

### Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

Prior to vacuum recovery activities, one groundwater sample (GW01) was collected from the excavation area and submitted for laboratory analysis of BTEX by EPA Method 8260B. Analytical results indicated that the benzene concentration was in exceedance of the COGCC standard. Groundwater analytical data is summarized in Table 2.

### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

☒ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Five monitoring wells will be installed via direct push drilling methods to delineate the extent of remaining dissolved-phase hydrocarbon impacts. Proposed well locations are illustrated on Figure 2. In addition, background soil samples will be collected to determine if elevated pH levels are consistent with native soil conditions or a result of oil and gas activity.

## OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☐ Were background samples collected as part of this site investigation?

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) \_\_\_\_\_ Volume of liquid waste (barrels) \_\_\_\_\_

☒ Is further site investigation required?

Five monitoring wells will be installed via direct push drilling methods to delineate the extent of remaining dissolved-phase hydrocarbon impacts. Proposed well locations are illustrated on Figure 2. In addition, background soil samples will be collected to determine if elevated pH levels are consistent with native soil conditions or a result of oil and gas activity.

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

On May 29, 2020, confirmation sampling was conducted below the produced water vessel during facility decommissioning. No soil was removed from the excavation.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

The groundwater sample collected from the excavation prior to vacuum recovery exhibited a benzene concentration in exceedance of the COGCC standard. Therefore, a groundwater assessment will be conducted to determine the extent of remaining dissolved-phase hydrocarbon impacts. In addition, background soil samples will be collected to determine if elevated pH levels are consistent with native soil conditions or a result of oil and gas activity. A remedial strategy will be selected upon the evaluation of supplemental soil and groundwater data.

Non-COGCC Disposal Facility: \_\_\_\_\_

## REMEDIATION COMPLETION REPORT

### REMEDIATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? ☐ No \_\_\_\_\_

Do all soils meet Table 910-1 standards? \_\_\_\_\_

Does the previous reply indicate consideration of background concentrations? \_\_\_\_\_

Are the only residual soil impacts pH, SAR, or EC at depths greater than 3 feet below ground surface? \_\_\_\_\_

Does Groundwater meet Table 910-1 standards? \_\_\_\_\_

Is additional groundwater monitoring to be conducted? \_\_\_\_\_

## RECLAMATION PLAN

### RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

The facility was decommissioned and will not be replaced. The location will be reclaimed in accordance with COGCC 1000 Series rules.

Is the described reclamation complete? \_\_\_\_\_

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim? ☐ Final?

Did the Surface Owner approve the seed mix? \_\_\_\_\_

If NO, does the seed mix comply with local soil conservation district recommendations? \_\_\_\_\_

## IMPLEMENTATION SCHEDULE

### PRIOR DATES
