## MECHANICAL INTEGRITY TEST

1. Duration of the pressure test must be a minimum of 15 minutes.
2. An original pressure chart must accompany this report if this test was not witnessed by an OGCC representative.
3. For production wells, test pressures must be at a minimum of 300 psig.
4. New injection wells must be tested to maximum requested injection pressure.
5. For injection wells, test pressures must be at least 300 psig or average injection pressure, whichever is greater.
6. A minimum 300 psi differential pressure must be maintained between the tubing and tubing/casing annulus pressure.
7. Do not use this form if submitting under provisions of Rule 326.a(1)B. or C.
8. Written OGCC notification must be provided 10 days prior to the test via Form 42, Field Operations Notice
9. Packers or bridge plugs, etc., must be set within 100 feet of the perforated interval to be considered a valid test.

348	348	348	348	

Test Witnessed by State Representative? ☐

OGCC Field Representative \_\_\_\_\_

**OPERATOR COMMENTS:**

The pressure run up and run down were not recorded by the gauge. We use the rig pump with a gauge to pressure up, then disconnect the pump and put on the Crystal gauge. We use a 1,000 psi gauge and if something licked up, there is a chance for the gauge to be damaged. We disconnect the gauge after the test and then reconnect to the rig equipment so the pressure will blow down to the tank, again we do not want to expose the gauge to risk of damage.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
