Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

While hot oiling the flowlines at the Newby State 27N-33HZ facility, approximately 2 barrels of oil was released on to the ground surface outside of containment. Assessment activities are ongoing at this time. The assessment details and analytical results will be summarized in a supplemental report. The topographic Site Location Map showing the geographic setting of the release is provided as Figure 1.

How was extent determined?

On June 17, 2020, four soil samples were collected from the base of the two shallow excavations and submitted for laboratory analysis of TPH, BTEX, naphthalene, pH, EC, and SAR. Laboratory analytical results for the soil samples indicated that TPH, BTEX, naphthalene, pH, EC, and SAR concentrations and levels are in full compliance with COGCC Table 910-1 allowable levels at the extent of the excavations. Approximately 40 cubic yards of petroleum hydrocarbon impacted soil were removed from the excavation and transported to Front Range Landfill in Erie, Colorado, for disposal, and approximately 9 cubic yards of impacted soil were transported to the Aggregate Recycle Facility in Weld County, Colorado, for recycling. The general site layout, excavation areas, and soil sample locations are depicted on the Excavation Site Map provided as Figure 2. The excavation soil sample analytical results are summarized in Table 1, and the laboratory analytical report is attached.
