COMMENTS:

Estimated volume flared: 4106 MSCF/Year

Content of the gas to be vented or flared: 1303 BTU/SCF

A copy of the most recent gas analysis on file has been attached to the Sundry Notice.

The third party gatherer/purchaser has permanently abandoned the sales line system.

There is no infrastructure available to connect to. The well will not be connected to infrastructure in the foreseeable future.

Production gas is currently used to run production equipment. Given the low gas production, it is uneconomic to install equipment to capture the gas and generate electricity, install a gas lift system, install new infrastructure to sell gas, etc.

This facility will be operated in full compliance with Rule 805.b.(1)

This facility will be operated in full compliance pursuant to the applicable requirements of Colorado's Air Quality Control Commission's Regulation No. 3 and Regulation No. 7, including Part D, Sections I & II.

CDPHE has issued Permit 20AD0063 for flaring activities on May 14, 2020.

Gas produced by the well is being combusted using an enclosed combustion devices (ECDs) located at the associated tank battery. The ECDs currently installed to flare gas are three (3) Cimarron 48" ECDs. Manufacturer specifications have been attached to the Sundry Notice.
