BRADENHEAD TEST REPORT

Step 1. Record all tubing and casing pressures as found. Step 2. Sample now. If intermediate or surface casing pressure > 25 psi. In sensitive areas, 1 psi.
 Step 3. Conduct Bradenhead casing. Step 4. Conduct intermediate casing test. Step 5. Send report to BLM within 3 days and to OGCC within 10 days. Include wellbore diagram if not previously submitted or if wellbore configuration has changed since prior program. Attach gas and liquid analyses if sampled.

BRADENHEAD TEST

Buried valve? ☒ Yes ☐ NoConfirmed open? ☐ Yes ☒ No

With gauges monitoring production, intermediate casing and tubing pressures, open surface casing (bradenhead) valve (if no intermediate casing, monitor only the production casing and tubing pressures.) Record pressures at five minute intervals Define characteristics of flow in "Bradenhead Flow" column using letter designations below:

O = No Flow; C = Continuous; D = Down to 0; V = Vapor
 H = Water H₂O; M = Mud; W = Whisper; S = Surge; G = Gas

Instantaneous Intermediate Casing PSIG at end of test: > 0

Comments: *Notes assume there is a deeper, buried bradenhead valve that was inaccessible during site visit. Produced water actively leaking from production casing valve upon arrival. Conductivity of water was 6,000 uS/cm. Dig down to intermediate casing valve. Intermediate casing is on a vacuum so no intermediate casing test conducted. Tubing requires a 2.25" fitting. Significant excavation would be necessary to expose bradenhead valve and allow for test.
